This post is part of the [Local Network Privacy FAQ](#).

Do I need the multicast entitlement?

 1.3k

You should apply for, and then enable, the [multicast entitlement](#) (`com.apple.developer.networking.multicast`) if any of the following apply:

- You send or receive multicasts or broadcasts
- You work with Bonjour service types not declared in the Bonjour service property (`NSBonjourServices`)
- You browse for advertised service types

See *What operations require the multicast entitlement?* for more details on these operations.

Also, as mentioned in *What operations require the multicast entitlement?*, not all of these operations actually require the multicast entitlement. However, if you do any of these operations we recommend that you apply for, and then enable, the multicast entitlement.
