How do I map my Multipeer Connectivity service type to an entry in the Bonjour services property?

To form the value for the [Bonjour services property](#) (`NSBonjourServices`), take your Multipeer Connectivity service type and add a leading underscore (`_`) and trailing `._tcp`. For example, if you pass `waffle-varnish` to the `serviceType` parameter of [init\(serviceType:discoveryInfo:session:\)](#), add `_waffle-varnish._tcp`.
