Local Network Privacy FAQ-13

⊗ This thread has been locked by a moderator.

This post is part of the Local Network Privacy FAQ.

Once my app has displayed the local network privacy alert, how can I reset its state so that it shows again?

Just delete the app from the device and then reinstall it. At this point any new local network access will display the local network privacy alert.

Alternatively, if you don't want to delete your app for some reason, you can reset the entire privacy subsystem using Settings > General > Reset > Reset Location & Privacy.
